PROFESSIONAL SUMMARY

Data Analyst and Machine Learning fresher (B.Tech, AI & Data Science, May 2026) with hands-on experience in Python, Pandas, SQL, and Power BI. Built ML models for traffic congestion and customer churn prediction, and delivered dashboards and data preprocessing pipelines during two analytics internships. AWS Generative AI certified. Seeking entry-level Data Analyst, Data Scientist, or ML Engineer roles.

TECHNICAL SKILLS

- Languages: Python, SQL, Excel
- Data & ML Libraries: Pandas, NumPy, Scikit-learn, XGBoost, NLTK
- Visualization: Power BI, Matplotlib, Seaborn, Excel Charts
- Cloud: AWS (Bedrock, S3, Lambda basics)
- Concepts: EDA, Data Preprocessing, Feature Engineering, ML Modeling, Statistics, NLP

WORK EXPERIENCE

Data Analyst Intern, MindfulAI Technologies | June 2026 – August 2026

- Profiled datasets and built preprocessing pipelines in Python (Pandas, NumPy) for machine learning model development.
- Built interactive dashboards and visualizations that gave non-technical stakeholders clear insights.
- Assisted with feature engineering for ML models.
- Worked in an Agile team, delivering analytical tasks within sprint timelines.

Data Analyst Intern, CODTECH IT Solutions | July 2025 – August 2025

- Cleaned, preprocessed, and transformed [dataset size or type] datasets using Python (Pandas) and Excel.
- Performed exploratory data analysis to identify trends and patterns that answered [a specific business question].
- Built reports in Matplotlib, Seaborn, and Power BI to support management decisions.
- Resolved missing values, duplicates, and inconsistencies, improving dataset reliability.

PROJECTS

Traffic Congestion Analysis & Intelligent Control System | *Python, Scikit-learn, OpenCV, Pandas, Matplotlib | [GitHub link]*

- Built an ML system to analyze congestion patterns and optimize signal timings across intersections, using [dataset size] records of vehicle count, speed, and time of day.
- Trained Random Forest and XGBoost models to predict congestion levels, reaching over 95% accuracy on [test set details].
- Designed a rule-based adaptive signal algorithm that reduced average wait times by ~25% versus fixed-cycle signals in simulation.
- Visualized traffic flow and congestion heatmaps with Matplotlib and Seaborn.

Customer Churn Prediction | *Python, Scikit-learn, Pandas, Matplotlib | [GitHub link]*

- Built a Random Forest and Logistic Regression model to predict customer churn, reaching 87% accuracy.
- Applied feature engineering and SMOTE oversampling to address class imbalance.
- Interpreted results using feature importance and ROC curves.

Sentiment Analysis on Product Reviews | *Python, NLTK, Scikit-learn | [GitHub link]*

- Built a TF-IDF and Naive Bayes classifier for positive, negative, and neutral sentiment.
- Preprocessed text with tokenization, stop-word removal, and lemmatization.
- Achieved 83% accuracy on a test set of 10,000 reviews.

Sales Data Analysis & Dashboard | *Python, Pandas, Power BI, Matplotlib | [GitHub link]*

- Analyzed 50K+ rows of retail sales data to find top-performing products and seasonal trends.
- Automated the data cleaning pipeline, reducing manual preprocessing time by 60% [from X hours to Y hours, if known].
- Created interactive Power BI dashboards tracking KPIs for business stakeholders.

AWS Generative AI Mini-Project | *AWS Bedrock, Python, Boto3*

- Built a generative AI workflow using AWS Bedrock with foundation models for text summarization and Q&A, as part of AWS Generative AI certification.

EDUCATION

B.Tech, Artificial Intelligence and Data Science | Grace College of Engineering, Thoothukudi (Anna University) | May 2026

CERTIFICATIONS

- AWS Generative AI, Amazon Web Services | July 2025
- Python, SQL, Power BI & Python Libraries, PySpiders Python Training Institute | July 2026
- Data Analytics Fundamentals, [issuer] | [date]

ADDITIONAL

- Languages: English, Tamil
- Availability: Immediate
- Preferred locations: Chennai, Bangalore
